

Only Works v2.0

A worker's verified portfolio. A hiring manager's trusted search. Twelve weeks from now, the rebuild ships.

TEAM

NAMKHA + 3 INTERNS

TARGET

WEEKS 1-12

We've built a lot. We've sold *nothing*.

v1 has ~14 active users, 109 IPC channels, a 5,700-line CSS file, and a hiring marketplace with a paid tier that nobody can actually pay for. The team feature was framed as bossware. The subscription system is stubbed. The product needs to be rebuilt around a story that someone outside our network will pay for.

14	109	\$0	12 ^{wk}
V1 ACTIVE USERS	IPC CHANNELS IN V1	REVENUE TO DATE	TO V2 LAUNCH

*Building resume, verifying skills,
and hopes of getting hired by the
managers on our platform.*

— OUTSIDE-NETWORK TESTERS • V1 USER RESEARCH • 2026

Three users.

One product.

♦ PRIMARY SUPPLY

Students & early-career

Building projects with OnlyWorks running. They need a verified portfolio that gets them their first job.

STAGE	0–5 yrs
EXAMPLES	CS undergrad, design student, bootcamp grad, intern
PAIN	Resume is thin — how to prove skill?
ENGAGEMENT	High — time-rich, hire-hungry

PAYS • FREE (.EDU STUDENT)

♦ PRIMARY SUPPLY

Mid-career professionals

Currently employed, "open to opportunities." Want a passive career history that compounds.

STAGE	3–15 yrs
EXAMPLES	SWE, PM, designer, marketer at digital cos
PAIN	LinkedIn is noise; promo prep is hell
ENGAGEMENT	Passive — weekly check-ins

PAYS • FREE OR \$9/MO PRO

↑ DEMAND • REVENUE

Hiring managers

Searching candidates whose skills are verified by actual work, not claims. Pays for access.

TIER	SMB → mid-market
EXAMPLES	Recruiters, TA, hiring managers, founders
PAIN	Resume signal is broken, esp. early-career
ENGAGEMENT	Active — search, post, reach out

PAYS • \$99 / \$299 / \$599/MO

Capture once. Output *three things*.

What ships. What *doesn't*.

✓ IN • 12-WEEK SCOPE

- ✓ *Unified capture engine (one trigger, many consumers)*
- ✓ *Five worker screens: Status, Portfolio, Privacy, Settings, First-run*
- ✓ *Stripe Checkout + webhook + portal — the #1 unblocker for revenue*
- ✓ *Hiring manager dashboard (web), paid tiers gated*
- ✓ *Public profile redesign (web)*
- ✓ *Training data consent flow + endpoints (start collecting day 1)*
- ✓ *Talent community nurture worker*
- ✓ *Per-user AI cost budget across text + vision*

✗ OUT • EXPLICITLY DEFERRED

- ✗ *Team / internal reporting UI — keep backend, ship UI in v2.2*
- ✗ *Promo packet generator — v2.1*
- ✗ *Weekly summary email — v2.1*
- ✗ *LinkedIn / Google OAuth at signup — magic-link only*
- ✗ *Resume upload + AI parsing — verified-by-capture is the differentiator*
- ✗ *Billing/invoice automation (Path A) — v3 or kill*
- ✗ *Goals page, Activity page, Sessions page*
- ✗ *Manager / Worker view toggle on reports*

Five screens. *That's it.*

Boring. *On purpose.*

LAYER	CHOICE	WHY THIS, NOT THAT
SHELL	Electron <i>33+</i>	Tauri sounds cool but its rough edges (uihook, auto-updater, signing) cost interns weeks. We need the bigger ecosystem.
RENDERER	React + TypeScript + Vite	Boring, hireable, well-documented. TypeScript replaces tons of v1's defensive runtime code at compile time.
STYLING	Tailwind v4 + shadcn/ui	v1 already had utility-class CSS — Tailwind is closer than it looks. shadcn is copy-pasteable, not a black box.
STATE	TanStack Query + Zustand	No Redux ever. React Query replaces v1's AppStore + manual cache invalidation entirely.
IPC	tRPC over IPC	Replaces 444-line preload.js with a typed bridge. Full TS inference. ~3 days to wire up.
BUILD	electron-vite	Hot reload in renderer = massive intern-velocity win. Keep electron-builder + electron-updater.

Four people.

Twelve weeks.

— INTERN 04

C

CaptureEngine skeleton. Interval
trigger + manual trigger. EventEmitter
that fires 'frame' events.

DELIVERABLE

SRC/MAIN/CAPTURE-ENGINE.TS

Seven choices.

One meeting.

01	Repo strategy Where the new code lives	NEW DIRECTORY ONLYWORKS_DESKTOP_V2/
02	Product naming Continue version line or rebrand	CONTINUE "ONLYWORKS 4.0"
03	Update channel How v1 users find v2	OPT-IN BETA AUTO-DEFAULT IN 4 WKS
04	HM pricing Confirm tier amounts	\$99 / \$299 / \$599 MONTHLY RECURRING
05	Student tier Free Pro for .edu emails	YES VERIFY VIA .EDU DOMAIN

By week 12.

Six numbers. Small on purpose. The point is a product that can be sold — not hockey-stick growth on day one.

WEEKLY ACTIVE 100+ workers using OnlyWorks every week (60% outside our network)	FIRST REVENUE \$1.5k/mo 5 paid hiring managers, MRR target	CONSENT RATE 80% opt-in to training data sharing (UX signal)
STUDENT USERS 30+ via 1-2 campus partnerships or a hackathon	TRAINING DATA 1M+ labeled frames collected, with consent metadata	STABILITY 0 capture-pipeline bug reports in the final 4 weeks

Now, the questions *that matter.*

▸ WHAT'S UNCLEAR?

▸ WHAT'S MISSING?

▸ WHAT SCARES YOU?

▸ WHAT'S EXCITING?
